

Mathematical Questions and Solutions Volume 54

Filesize: 5 MB

Reviews

Excellent electronic book and helpful one. It usually does not cost a lot of. I am quickly will get a pleasure of reading through a written publication.

(Bernardo Feeney Jr.)

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1891 Excerpt: .inverse of the given curve with respect to the origin. If the chord of curvature through the pole be kr , it will be found that $dp/ds = (4-1) \cot OPY$ (when S lies on OP), whence $r = xp - 1$, $r^2 = a^2 - p^2$ will be the equation for a curve such that the locus of the pole of the osculating spiral is the inverse, with respect to the circle $r = b^2$, of the curve. If the constant term in this equation be omitted, it is the equation between r and p for the spiral. Perhaps the equation would be better, written in the form $r = a^2 (//) + 42$, since $k = 2$ (the equiangular spiral) would give $r^2 = p^2 + 42$, or the involute of a circle which is only a particular case. If we put $k = -2$, the osculating curve is the rectangular hyperbola, and the curve is a central conic. That is, if the rectangular hyperbola of four-point contact be drawn at each point of a central conic, the locus of its centre (the pole in this case) is the inverse of the conic with respect to the director circle. No doubt, other particular cases may be readily investigated, such as the Lemniscate of Bernoulli, Cardioid, Parabola, c. 10415. (Professor Steiner.)--Soient M, M' , les extremités de deux diamètres conjugués $OM, O'M'$ d'une ellipse. Démontrer que la somme $\tan^2 \angle JFaU + \tan^2 \angle JFM'F$ est constante. 10569. (Professor Tarry.)--Le rapport anharmonique de...
