LE JAPON CONTEMPORAIN (NOTES ET IMPRESSIONS) .

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 76 pages. Original publisher: Cincinnati, Ohio : National Risk Management Research Laboratory, Office of Research and Development, U. S. Environmental Protection Agency, 2008 OCLC Number: (OCoLC)341234715 Subject: Water -- Purification -- South Dakota. Excerpt: . . . Date Action Taken October 2001-Monitoring of the pit conditions continued. Nitrate reduction was proceeding at a rate much slower September 2002 than expected. This was attributed to a combination of lower than optimum pH along with the presence of elevated aluminum in solution. April 2002 Additional molasses was added to the pit, along with sodium hydroxide to raise the pH of the water to near neutral. September 2002 A concerted effort was made to place the pit into optimum conditions for biological activity going into the winter of 2002-2003. These efforts included raising the pH to neutral with sodium hydroxide, as well as adding more nutrients. In addition, wood chips were added with the intention that they would become waterlogged and sink, and thereby provide a suitable substrate for bacteria to attach to and grow on. October 2002 Foam was observed on the water surface, likely due to nitrogen and carbon dioxide gases produced from bacterial activity. Samples taken indicated a significant drop in nitrate concentration. April 2003 Samples and profiles taken through the winter of 2002-2003 showed rapid progress in nitrate reduction. Physical evidence of sulfate reduction was observed after ice-off in April 2003, by the presence of black solids and hydrogen sulfide gas aromas whenever the surface water was disturbed. April 2003 - Continued monitoring confirmed the progression of sulfate reduction, as evidenced by a dramatic April 2004 drop in dissolved concentrations of metals that form sulfide precipitates (e. g. , copper, cadmium, zinc); the presence of...
