Subsequent experiments and practice have, in a measure, confirmed this, but I must confess that just what was the cause, and where to find a reasonable explanation of this peculiar phenomena from a scientific standpoint, I am as yet unable to answer with certainty. CLARIFIERS, DECOLORIZERS, ETC. Regarding these materials, there is not much of importance to say from a physical standpoint, other than color. Arsenic, which is used as a clarifier, does increase the crushing strength somewhat, but it is seldom found in the finished metal in sufficient quantity to be noticeable, and the same is true of manganese. Cryolite, which is used sometimes as a clarifier, is of but little value, and is somewhat detrimental to the furnace or pots, owing to the liberation of fluorine. It would be of some value, could it be used in sufficient...
